g:Profiler respects our users' privacy and therefore we do not store user gene lists. There is an exception. If you choose to share your results via short link then we need to store the query to reproduce the results in the future. User query is stored when show or copy url button is hit. In order to improve our service we store query metadata (e.g was the list ordered, was custom background provided). For the purpose of not showing announcements repeatedly, our website uses LocalStorage.
